

# WeDo 2.0 Day Camp

FOR STUDENTS 7-10 YEARS OF AGE

Is your child interested in building with Legos? Is your child interested in engineering or computers? Developed specifically for younger kids ages 7-10, our LEGO® WeDo™ Robotics Camp is a great introduction into engineering, basic computer programming, and robotics. In our robotics camp, your child will use robotics kits to build mechanical devices and robots. They will work with computers to write simple programs that control these devices. We will dive into robotics, and we will work with simple motors and sensors to learn basic engineering principles. Your child will construct and program LEGO® bricks to move with motors, react with sensors, and emit sounds from their computers. Register for this camp today!

**To Register:**

<http://stanislaus.k12oms.org/445-131773>

**5-Day Event June 11-15, 2018**

**8:30a m-11:30 am**

**Cost: \$150**

**Space is limited so register early!**
